

PROJECT REPORT

Title: A Mental Awareness Blog.

Aim: To build a Website that supports mental health.

Abstract: In this project, we are building a website that supports mental health. Anyone who is suffering from PTSD and/or Anxiety can refer to our website and learn how to tackle them. We also have a resume section where the content writers willing to write for this website can fill the form and those details will be saved in our database.

Technologies Used: HTML, CSS, JavaScript, PHP, SQL.

Database used: PHPmyadmin

Algorithm:

AN OPPORTUNITY AWAITS

|| ****DIRECTED TO THE RESUME PAGE****

*FIRST NAME, LAST NAME, EDUCATION,
EMAIL, PHONE NUMBER*

||

SUBMIT

Sample input and output:

INPUT:

First Name: abc

Last name: xyz

Education: High school

Email: apple_pie@ gmail.com

Phone number: 9999999999

OUTPUT:

Registration is successful.

****The data is stored in the database****

End User: Everyone who wants to know more about mental health or write about it can use the website. We assume that they know the english language.

Conclusion: In conclusion, the website is made for the awareness of ptsd and anxiety and also presents some coping mechanisms. This website presents itself completely in english language and was built using appropriate technologies.
